Micro Finishing Detailing Cloths

The Perfect Material For Both Cleaning And Polishing.

Its split microfiber strands pick up dirt like a magnet, highly absorbent, and scratch free polishing.

These premium Micro Finishing Detailing Cloths are highly absorbent, retaining moisture at more than six times their dry weight. This enables them to be used for both cleaning and polishing applications. Use a dampened cloth for cleaning and a dry cloth for polishing and fingerprint removal. Haze and oily residue left from waxes, polishes, glazes and cleaners are quickly and completely removed. Unlike conventional cloths they clean glass and mirrors streak-free, even at the corners. Microfiber cloths are also recommended for cleaning chrome, plastic, vinyl and leather.

Multi-Dimensional Construction For High Durability

A specially wrapped overlock hem around the edge of the cloth prevents it from shredding or stretching out of shape. The knitted fabric will not unweave or easily wear out because the split microfiber strands are multi-dimensionally knit. Because of the cloths superior dirt lifting and trapping properties, frequent hot water machine washing is recommended. Each cloth may be laundered up to 500 times at temperatures up to 140°F, using a standard detergent. They dry fast and retain their original shape.

Features:

- Multi-Dimensional Construction
- Wedged Shaped Split Microfiber Strands
- Special Heat Treating Process

Advantages:

- Durable
- Highly Absorbent
- Lint Free
- Scratch Free

Usages On:

- Paint
- Glass
- Chrome
- Plastic
- Vinyl
- Leather
